

## Website Firewall Readiness Audit Checklist

### 20-Point Firewall Deployment Audit

- Is a WAF or CDN firewall active?
- Are managed threat rules enabled?
- Are admin routes protected?
- Is wp-login or admin rate-limited?
- Are bots challenged?
- Are exploit payload signatures blocked?
- Are upload paths reviewed?
- Are checkout/account pages protected?
- Are geographic anomalies monitored?
- Are suspicious IPs blocked?
- Are alerts configured?
- Are firewall logs reviewed monthly?
- Are false positives reviewed?
- Are top blocked patterns analysed?
- Are plugin changes reflected in firewall rules?
- Is XML-RPC reviewed if WordPress?
- Are customer logins protected?
- Is DDoS filtering available?
- Is firewall tuning ongoing?
- Does the firewall create measurable friction?

#### Scoring:

17–20 = Strong perimeter defence maturity

12–16 = Moderate firewall effectiveness

0–11 = High avoidable exposure remains
