

Website Security Quick Audit Checklist

15-Point Website Security Self-Audit

- Is your CMS fully updated?
- Are all plugins/themes active and necessary?
- Are admin passwords 16+ characters?
- Is multi-factor authentication enabled?
- Is your admin panel login protected?
- Is SSL installed and valid?
- Do you have a dedicated firewall?
- Is malware scanning active?
- Are file change alerts enabled?
- Are daily backups automated?
- Are backups stored offsite?
- Do you know your emergency response steps?
- Are customer forms encrypted?
- Is user access limited by role?
- Do you perform monthly security reviews?

Score:

13–15 = Strong posture

9–12 = Moderate risk

0–8 = High exposure
